

WaterClean - Water based mould cleaner

- 1) Apply a SMALL amount of WATERCLEAN directly to the mould surface. Shake or stir before use if necessary.
- 2) Scrub small sections using a damp paper towel. For very large parts, an electric or air buffer can be used. N.B. DO NOT allow WATERCLEAN to dry on the mould surface.
- 3) Remove using WATER only, by wet cloth or sprayer.
- 4) Remove all residue- the surface should "feel" clean.
- 5) You are now ready to apply a sealer or release agent.

Carefully seal WATERCLEAN when not in use to avoid evaporation. If this happens either during use or storage, a light misting with water can return WATERCLEAN to usable consistency. NOTE: the addition of too much water will reduce efficiency.

DOT HAZARD CLASSIFICATION: Flammable Liquid 3
DOT I.D. NUMBER: UN 1866
